

### REMARKS

Claims 1-22 are currently pending in the present application, with Claims 4, 8, 11, 12-14, 16-18, and 22 being preliminarily amended to correct grammatical errors.

Attached hereto is a marked-up version of the changes made of the specification and claims by the current amendment. The attached page is captioned "Version with markings to show changes made".

In the unlikely event that the transmittal letter is separated from this document and the Patent Office determines that an extension and/or other relief is required, applicant petitions for any required relief including extensions of time and authorizes the Assistant Commissioner to charge the cost of such petitions and/or other fees due in connection with the filing of this document to Deposit Account No. 03-1952 referencing docket no. 48922.20003.00/28189.00010. However, the Assistant Commissioner is not authorized to charge the cost of the issue fee to the Deposit Account.

Respectfully submitted,

Dated: May 29, 2001

**VERSION WITH MARKINGS TO SHOW CHANGES MADE**

**In the Claims:**

Claims 4, 8, 11, 12-14, 16-18, and 22 were amended in the following manner:

4. (Amended) The cryptographic communication system according to claim [2] 1, wherein said computer readable storage medium includes a PRN re-map table.

8. (Amended) The cryptographic communication system according to claim [8] 6, wherein said computer readable storage medium includes an executable program, said executable program causing said systems re-map generator to re-map the data of said PRN re-map table.

11. (Amended) The cryptographic communication system according to claim [11] 10, wherein said first computer readable storage medium contains a PRN re-map table.

12. (Amended) The cryptographic communication system according to claim [11] 10, further comprising a systems re-map generator connected to said first computer readable storage medium, wherein said systems re-map generator selectively rearranges data in said first computer readable storage medium.

13. (Amended) The cryptographic communication system according to claim [11] 10, wherein said third computer readable storage medium includes:

a key change period value; and

a crypto midnight date and time value.

14. (Amended) The cryptographic communication system according to claim [11] 10, wherein said third computer readable storage medium includes a security fuse.

16. (Amended) The method according to claim [16] 15, further comprising the steps of:

inputting into said computer readable storage medium a key change period value; and  
inputting into said computer readable storage medium a crypto midnight date and time value.

17. (Amended) The method according to claim [17] 15, further comprising the step of initializing said pseudo-random number generator.

18. (Amended) The method according to claim [18] 15, further comprising the step of initializing said computer readable storage medium.

22. (Amended) The cryptographic communications system according to claim [20] 21, wherein each of said pseudo-random key generator includes a unique systems seed value.
